

## Reactivity series of metals

Equipment: cell array (kennolevy)

Test the reactions of 4 different metals (powder/solid) with 4 different solutions. Write your findings in a table.

	Cu	Fe	Zn	Mg
ZnCl <sub>2</sub>				
HCl				
CuSO <sub>4</sub>				
AgNO <sub>3</sub>				

Things to look for:

- Bubbling / fizzing
- Colour changes: both in metal and solution
